-

PROJECTS

AutoCar Sale Application

Role: Led Salesforce administration for the Auto Car Sale Project as a team lead, ensuring seamless integration and optimal system performance.

Responsibilities:

- Configured user roles, profiles, and permissions to enhance security and data access.
- Utilized Jira and Confluence for streamlined project management, task tracking, and documentation maintenance.
- Developed and implemented complex approval processes and Salesforce Flows to automate routine tasks, significantly reducing manual workload.
- Leveraged Salesforce report and dashboard functionalities to provide real-time insights into sales performance.

COVID-19 Contact Tracing Application :

Role: Served as the Salesforce Developer and implementation of a Contact Tracing Application in response to the COVID-19 pandemic.

Responsibilities:

- Designed and developed custom objects and fields to capture and track contact tracing information.
- Implemented a user-friendly interface using Visualforce pages and Lightning components.
- Implemented validation rules to enforce data accuracy and completeness, ensuring reliable contact information.
- Developed Apex triggers to automate complex business logic, improving data consistency and reducing manual errors.
- Configured role-based security to control access to sensitive health information & Implemented field-level security and object-level security to restrict data access based on user roles.

Car Hub Project (Lightning Web Components - LWC):

Role: Contributed as a Salesforce Developer in the development of the Car Hub project using Lightning Web Components.

Responsibilities:

- Designed and developed Lightning Web Components for a modern and responsive user interface in the Car Hub application.
- Integrated the Car Hub project with Salesforce data using Lightning Data Service for efficient data retrieval and manipulation.
- Utilized Apex classes to communicate with the Salesforce database and retrieve relevant car information.
- Created custom objects and fields to capture specific details related to cars, including make, model, year, and pricing information.
- Configured page layouts and record types to tailor the user interface to the specific needs of the automotive industry.
- Implemented event handling and utilized Lightning events to facilitate communication between parent and child components, ensuring a cohesive user experience.
- Conducted unit testing for Lightning Web Components to ensure functionality and identify/resolve potential issues.

Recruiting App Project:

Role: Functioned as both Salesforce Administrator and Developer for the end-to-end implementation of a Recruiting App.

Responsibilities:

- Configured user profiles, roles, and custom objects to capture and track candidate information, interview schedules, hiring stages, and permissions to ensure secure access to sensitive recruiting data.
- Customized page layouts and record types for streamlined data entry and user-specific views.
- Implemented data validation rules to maintain data integrity and accuracy.
- Utilized Salesforce Flows for process automation.

TOOLS USED

- Salesforce Lightning Platform
- Salesforce Lightning Web Components (LWC)
- VS CODE
- DATA LOADER
- Salesforce Developer Console
- Jira for project management
- Confluence
